EDUCATION

National ChengChi University

September 2022– June 2027

Bachelor of Science

Major: Statistics

Big Data Analytics Program

Relevant Coursework: Mathematical Statistics, Regression Analysis, Natural Language Processing, Big Data Analysis in Social Science, Artificial Intelligence Programming

WORK EXPERIENCE

Precise Big Data Company

Data Scientist Internship

September 2025 – March 2026

- Built and trained machine learning classification models using ECG signal data to support disease classification and prediction.
- Optimized models for three disease types and improved ECG signal digitization workflows in collaboration with the technical team.
- Improved model performance by addressing class imbalance, reducing the gap between recall and precision from 15% to within 5%, and resolving file format inconsistencies that had previously reduced usable ECG data.

LEADERSHIP & INVOLVEMENT

National ChengChi University Baseball Team

Student Athlete

September 2023 – present

- Being a team player, encourage communication and carry out strategies accurately
- Perform under pressure as a relief pitcher, holding down emotions of teammates during key moments
- Served as sports analyst in the baseball academy, used data and visualizations to determine optimal training systems and in-game strategies

International Volunteer Association

Special Assistant

September 2023 - July2024

- Designed lessons and led camps for elementary school's students at remote fishing villages
- Took care of and accompanied students for their after-school life individually

PROJECT EXPERIENCE

Internet Addiction Risk Prediction

- Investigated how the psychological state, pandemic experiences and demographic of an individual could be correlated to internet addiction
- Determined features impacting prediction accuracy, and built a model to predict addiction using Python

Spatiotemporal Analysis of YouBike Usage in Taipei

- Analyzed weekday vs. weekend usage patterns with usage-type classification
- Compared usage behaviors across three university districts
- Applied chi-square and t-tests to evaluate station–district independence and trip volume differences

NBA Data Analysis and Related Insight

- Performed data collection and intelligence gathering using Excel, and analyzed the performance of NBA team Los Angeles Lakers, then developed a future blueprint plan for the team
- Made models to predict the expected points per game and recommend the appropriate offensive strategies

SKILLS

Programming & Data Analysis: Python, R, SQL, Excel

Python Libraries: pandas, NumPy, matplotlib

Machine Learning & Deep Learning: scikit-learn, PyTorch, Classification, Regression, Model Evaluation

Statistics: Hypothesis Testing, Regression Analysis, Chi-square Test, t-test

Languages: Mandarin (Native), English (Advanced)
